AegisPay.

Useful data. Bounded authority.

Let a release assistant choose a specialist report.
Keep spending permission outside its prompt.

THE ACHIEVED BOUNDARY

01

verified Noir / Velo authorization

Historical Testnet proof · 7 Nov

Salvador Vincent Javier · solo builder

Public proof viewer live · full purchasing agent unfinished

HYPOTHETICAL CUSTOMER

Should we ship this dependency update?

A SMALL DEVELOPER TEAM ASKS

"Review **demo-parser**.
Buy only what helps a
basic release triage note."

Total task ceiling · 0.10 Testnet XLM

WHY PAID DATA COULD MATTER

Metadata names the report. It cannot answer the task.

A specialist report could add advisory context and known limitations beyond the free listing.

The useful output: a sourced triage note that says what remains unknown.

Illustrative scenario only. demo-parser and both reports are fictional; no security assessment or delivered answer is claimed.

NOT AN EXECUTED PURCHASE

Choose the information. Keep the rules.

Fictional specialist reports	Illustrative Testnet price	Per-payment cap: 0.10 XLM
QuickSignal Basic advisory context	0.03 XLM	Within the example cap
DeepTrace Extended investigation	0.12 XLM	Above the example cap

Agent decides usefulness

Buy relevant data, or buy nothing.

Trusted tools control permission

Current quote, task budget and signing.

No completed model choice or report delivery. Contract cap + expiry + finite escrow are distinct from the application task budget.

Scenario / source provenance ↗ · 300000 / 1200000 stroops; 1000000-stroop example cap.

HISTORICAL · 07 NOV

Two SDKs.
The same authorization.

01

Noir

Policy and escrow prepare authorization.

Agent key signs server-side

→

02

Velo Gas

Sponsor and submit that signed invocation.

Persist identity before handoff

→

03

Independent proof

Match the successful envelope, call and event.

Reconcile inner / outer identity

Our contribution

Exact integration + evidence mapping.
A dependable resource-specific workflow is the next gate.

Noir supplies policy / escrow; Velo supplies sponsorship / submission. Caps, agent wallets and HTTP 402 alone are not unique.

Saved independent evidence ↗ · Verifier ↗

SAVED TESTNET RUN · 07 NOV

One payment.
A readable receipt.

0.03

Testnet XLM

300000 stroops authorized
into merchant-pending escrow.

A separate merchant claim
later cleared pending to zero.

AEGISPAY / HISTORICAL PROOF MATCHED

Authorization	**One verified operation**
Escrow	**1.00 → 0.97 XLM**
Merchant pending	**0 → 0.03 → 0 XLM**
Independent match	**Envelope + call + event**

Inner authorization ↗

Outer / event: same payment ↗

Separate merchant claim ↗

× **0.12 requested / 0.10 cap:** actual contract simulation refused it.
Unsigned and unsubmitted; no included failed transaction.

OBSERVED APP ATTEMPT · 09 NOV

Unknown means hold.

One persisted financial handoff. No verified outcome.

300000	0	0
stroops held	stroops spent in app ledger	report entitlements

Saved purchase identity → **UNKNOWN** → Observe that identity

No replacement payment. No report release.

Latest saved Velo status read: HTTP 409; prior RPC: NOT_FOUND. This is observed conservative behavior, not completed recovery.

Persisted attempt ↗ · Saved status observation ↗

UNVALIDATED · NO EXISTING PARTNERS

Start with one developer. And one data provider.

ONE DEVELOPER

A release assistant with a real data gap

\+

ONE SPECIALIST PROVIDER

A useful report endpoint with permission to integrate

01 / Usefulness

Does the report improve a task they repeat?

02 / Reliability

Correct access, unresolved duration, integration effort.

03 / Economics

Would a provider pay for the gateway?

Revenue hypothesis: provider gateway subscription or fulfilled-request fee. Demand, willingness to pay, costs and margins are unvalidated.

Next: one complete purchase. Verified end to end.

One agent developer.
One specialist report provider.
Technical feedback on the boundary.

Next gate: genuine model choice → verified report → sourced answer → demonstrated recovery.

- **Proved**
  Historical Noir / Velo authorization + separate claim
- **Live**
  Public recorded-proof viewer
- **Implemented locally**
  Workspaces, PostgreSQL, auth / wallet APIs, Gemini adapter
- **Open**
  Full model purchase, recovery and hosted release
